THE SYMBOL OF A HOMETOWN

The 18th century watchmaker Emile Chouriet may be from Gex, on the the Swiss-French border but the contemporary brand Emile Chouriet was certainly born in Geneva. It even made its studios in the city a few years ago.

Geneva, the 'city at the top of the lake' as some affectionately call it, is well-known for its huge Jet d'Eau whose white foam tickles the stars in the middle of the Lake Geneva. It's also famous for landmarks such as the Bâtiment des Forces Motrices, a 19th century hydro power plant nestled on the Rhône that now plays host to shows.

Emile Chouriet propose now two new models that complete this range of refined watches. One comes in a version from the Geneva watchmaking tradition. Its classic ivory dial has an engine-turned centre with horizontal Côtes de Genève stripes and silver roman hour numerals. In an other hand, the second new model has a contemporary black dial, with silvered digits and red prints on the main meridians.
